

THE BIRD'S EYE VIEW

1 The bird's eye view is a perspective from above, looking down at the scene. It is often used in photography to show the layout of a scene or to emphasize the height of a subject. In nature, birds often use this perspective to scan the ground for food or to spot predators. This view can be achieved by shooting from a high angle, looking down at the subject.

2 This perspective is also used in film and television to create a sense of scale and grandeur. It can be used to show a large landscape or a city from above, or to focus on a specific detail of a scene. The bird's eye view can be a powerful tool for storytelling, as it allows the viewer to see the world from a different perspective.

3 In nature, birds often use this perspective to scan the ground for food or to spot predators. This view can be achieved by shooting from a high angle, looking down at the subject.
